
RADIONET MONITORING INFORMER 5X ALARM TRANSMITTER

INFORMER 5X ALARM TRANSMITTER

INTRODUCTION

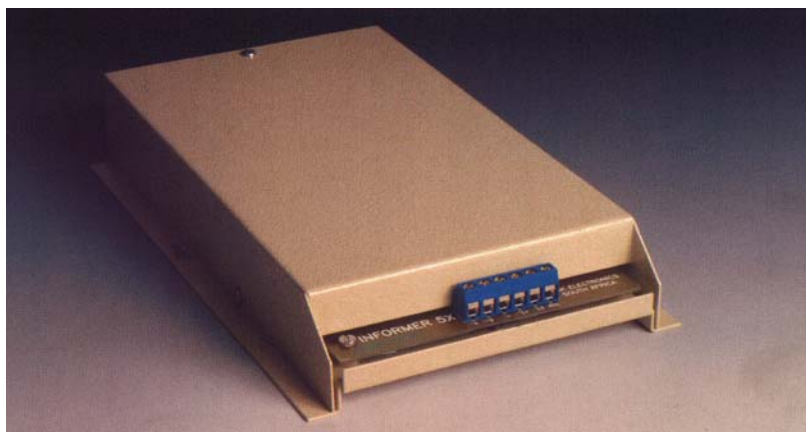

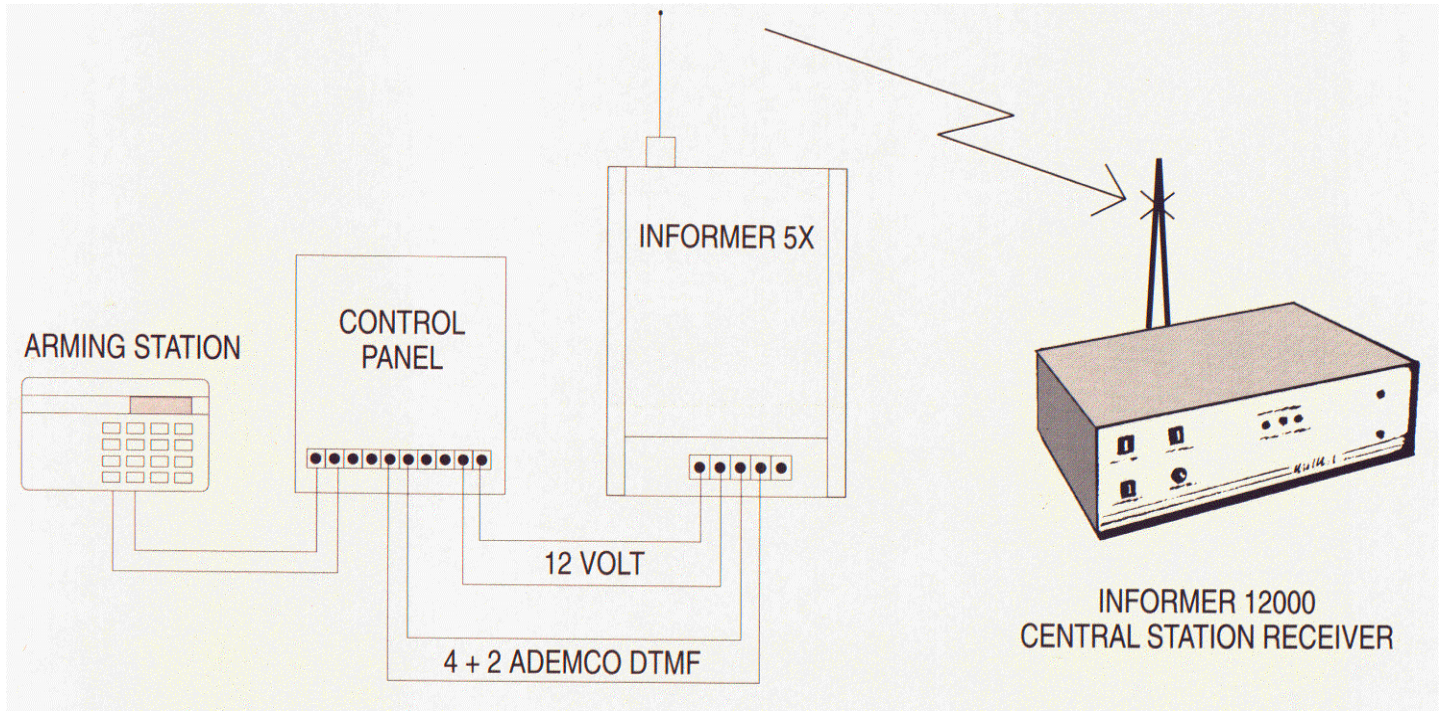

The **Informer 5X** Alarm Transmitter has been specifically designed and manufactured to meet the demands of the Security and Fire Industry for a radio transmitter to send a greater and more detailed package of signals. RADIONET MONITORING met this challenge and the 5X Transmitter is unique in its ability to transmit via radio all popular alarm panel signals.

The Informer 5X outstation transmitter accepts Ademco 4+2 DTMF from the communicator of your control panel. This downloaded information is then transmitted to the Informer 12000 central control station via the radio network.

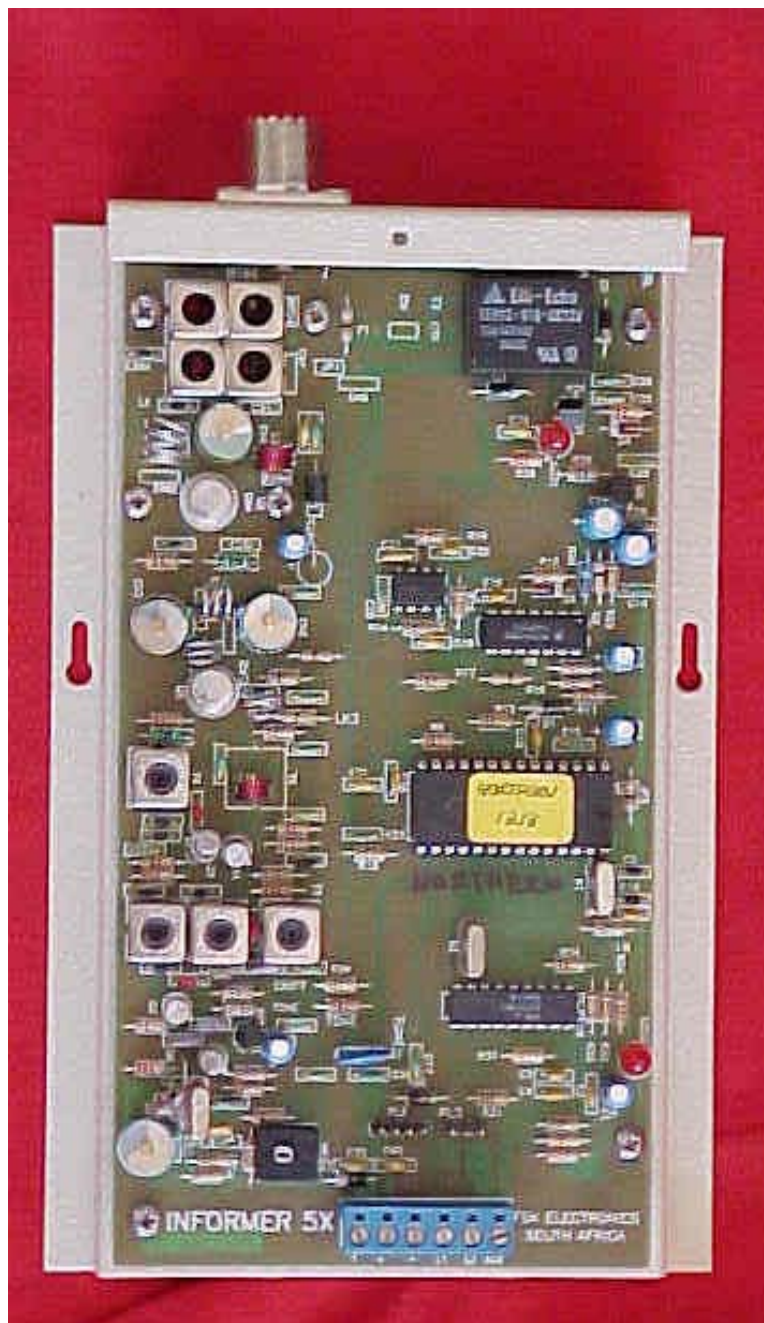

The 5X Transmitter is capable of reporting up to 24 zones, 20 keyholders, duress medical and fire signals.

Microprocessor technology ensures excellent reliability and features.

FEATURES

- 32000 Account codes
- 250 Information telemetries
- Communicator Interface
- Auxillary Input
- 5W Power output.
- Power-up detection
- Power-up message sent when connected to 12V battery
- 4-Level anti lock-on protection (transmitter “lock-on” message reported to base if transmitter locks-on)
- Built-in external and internal “watch dogs” keep a constant watch on the microprocessor and transmitter
- Entire message transmitted in 140 milli-seconds
- Up to 8 different programmable start codes
