

TITAN v2.00 with Windows 7

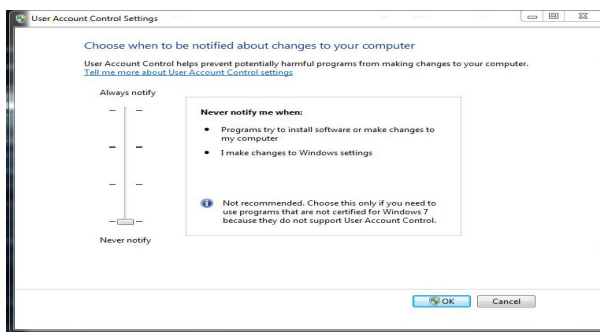

Introduction

This document guides you through the process of setting up TITAN v2.00 with Windows 7.

Before you begin

PLEASE ENSURE YOU ARE LOGGED ON AS AN ADMINISTRATOR.

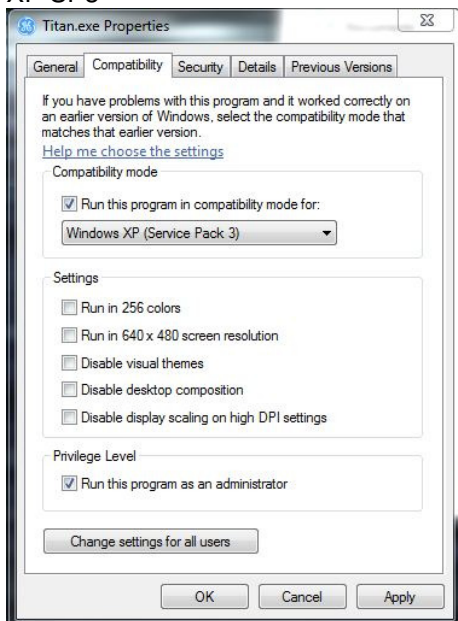

Disable User Account Control (UAC). To do this Left-click on Start, then type "UAC" in the Search bar and press enter. Reduce to "Never Notify" (as below).

Process

Install TITAN as normal. Once TITAN is installed, go to My Computer > C:\Program Files\Tecom\Bin\ Right click on "Titan", left click on "Properties" then left-click on the Compatibility tab and select "Run as Administrator"

If it is 64 bit Windows 7 you will also need to select "Run this program in compatibility mode for Windows XP SP3"

Please ensure this process is performed on all files listed below in C:\Program Files\Tecom\Bin\ or if it is 64 bit Windows 7 C:\Program Files(x86)\Tecom\Bin\

CardData34bit
Dcomperm
DeActivateSys
Histqryproc
Regsvr32
setACL
SetPermissions
SystemMgr
Tdbupdat
Titan
TitanPackDB
TitanUtil
Wiegand26
Winhlp32

In C:\Program Files\Common Files\Borland Shared\Bde or Program files(x86) the bdeadmin also file also needs to be set to "Run as Administrator". If it is 64 bit Windows 7 you will need to select "Run this program in compatibility mode for Windows XP SP3 also

Change Database Settings

Go to Start > All Programs > Titan Security System > Database Administrator.

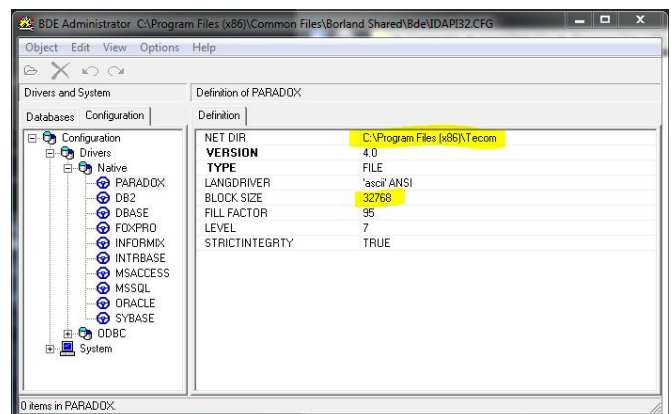

Left-click on Configuration Tab> Configuration > Drivers > Native > Paradox

Change NET DIR to C:\Program Files\Tecom\ or or if it is 64 bit Windows 7 C:\Program Files(x86)\Tecom\
Increase BLOCK SIZE TO 32768 (as below).

Left-click on Configuration Tab> Configuration > System > INIT

In the SHAREDMEMLOCATION type 5bde

Then left-click on Object > Apply

*Please note in NET DIR it is meant to be C:\Program Files\Tecom.

Once all this is done, restart the computer. TITAN should work without errors.
